

Innovative

FIBER OPTIC SWALLOW TESTING AVAILABLE

ClearSky Rehabilitation Hospital of Flower Mound offers innovative, fiber optic endoscopic evaluation of swallowing (FEES) testing.

FEES provides high-quality, real-time results at the patient's bedside. During this minimally invasive procedure, a speech therapist passes an endoscope with a small nasal camera and light through the nose into the throat to view and assess how well the patient is swallowing.

The test provides an immediate, objective assessment using real foods and liquids.

Benefits of FEES include:

- Patient convenience, as procedure is performed on-site at the bedside; no waiting for results.
- Evaluation of real foods and liquids; no radiologic material used in testing.
- Immediate information provided to allow creation of a treatment plan.
- Determination of penetration, aspiration, delay in swallowing initiation, and pharyngeal residue equal or greater than modified bariums swallow studies (MBSS).
- Assessment and visualization of pharyngeal secretions that are unable to be detected during MBSS.
- Disposable scopes, allowing testing on COVID-positive patients without a wait to be cleared from isolation precautions.
- Ease of use with bariatric and spinal cord patients who have positioning challenges.
- Ability to perform study any time during a patient's stay.
