

NEUROLOGICAL Rehabilitation

If you have a patient who has experienced a brain, spinal cord, or neurological injury or illness, we can help.

At ClearSky Rehabilitation Hospital of Rio Rancho, our physician-led, multidisciplinary team helps patients reduce symptoms, regain function, and return to their homes with as much independence as possible.

We work with patients and their family members to address physical, cognitive, and emotional concerns. We create customized care plans to best address potential short and long-term effects, including:

- Alertness levels
- Memory and attention issues
- Reasoning and problem-solving struggles
- Mobility issues
- Fine motor skills
- Mood changes
- Impulsiveness and agitation
- Eating and swallowing issues
- Medical complications

Upon discharge, we help arrange further resources as needed, such as ordering for durable medical equipment, follow-up physician appointments, outpatient therapy, or home health. We supply patients and their families with educational information on continued exercises, behavior modifications, home modifications, and assistive devices, if necessary.
